Test results

according to EN ISO 11611

parameter	acc. to ISO 11611	requirement	test result	note			
				P	F	N/A	N/T
General	section 4.1 ISO 13688 (EN 340)	General requirements which are not specifically covered in this International Standard shall be in accordance with ISO 13688. Welders' protective clothing shall be designed without electrical conduction from the outside to the inside, e.g. by metal fasteners. Conformity shall be checked by visual inspection.	given			P	
Protective clothing	section 4.1.1	Welders' protective suits shall completely cover the upper and lower torso, neck, arms and legs. Suits shall consist of: a) a single garment, e.g. an overall or boiler suit; b) or a two-piece garment, consisting of a jacket and a pair of trousers. The jacket of a two-piece suit shall provide a minimum overlap of 20 cm between the jacket and the top of the trousers. This minimum overlap shall be maintained in all positions and in movements encountered during welding. Conformity shall be checked by visual inspection and practical testing, such as physical measurement of the overlap in all positions and movements normally encountered during welding.	given			P	
Additional protective clothing	section 4.1.2	Welder's protective garments may be designed to provide extra protection for specific areas of the body when worn in addition to a suit according to 4.1.1, e.g. neck curtain, hoods, sleeves, apron and gaiters. Performance testing of partial protective garments shall be carried out on the complete assembly. Additional protective clothing such as hoods, sleeves, apron and gaiters shall cover the intended areas if worn with a suit of appropriate size and shall also meet the requirements of this International Standard.	given			P	
sizes	section 4.2 ISO 13688 (EN 340)	Garment sizes shall be in accordance with the requirements of ISO 13688.	given			P

Pockets	section 4.3	<p>Where garments are constructed with pockets, the pockets shall be constructed to the following design:</p> <p>a) pockets with external openings shall be made of material(s) conforming to 6.7 and 6.8.</p> <p>b) external opening pockets including pass through openings shall be flapped except for:</p> <ul style="list-style-type: none"> - side pockets below the waist which do not extend more than 10° forward of the side seam; - a single rule pocket with an opening not greater than 75 mm placed behind the side seam on one or both legs and measured flat; <p>c) all flaps shall be stitched down or capable of fastening the pocket closed. They shall be 20 mm wider than the opening (10 mm on each side) to prevent the flap from being tucked into the pocket.</p> <p>Conformity shall be checked by visual inspection and physical measurement.</p>	given			P	
Closures and seams	section 4.4	<p>Closures shall be designed with a protective cover flap on the outside of the garment. The maximum distance between buttonholes shall be 150 mm. If zippers are used, the slide fastener shall be designed to lock when completely closed. Cuffs may be provided with closures to reduce their width. The closure and any fold which it creates shall be on the underside of the cuff. Cuffs shall not have turn-ups.</p> <p>Neck openings shall be provided with closures.</p> <p>Trousers or one-piece suits shall not have turn-ups. They may have side slits which shall have a means of closure and the slit and closure shall be covered.</p> <p>Overlapping seams on the outside of the garment shall be downward facing and overstitched.</p>	given			P

				P	F	N/A	N/T
Pre-treatment	section 5.2	<p>Prior to testing, the protective clothing shall be pre-treated. Leather shall not be pre-treated.</p> <p>If a manufacturer indicates that the performance of the garment is intended for a single use only, then the tests shall only be carried out on new material.</p> <p>Before each test the cleaning of the protective clothing shall be in line with the manufacturer's instructions, on the basis of standardized processes. If the number of cleaning cycles is not specified, five cleaning cycles shall be performed.</p> <p>Performance tests specified in 6.7 shall also be executed after the maximum number of cleaning procedures indicated by the manufacturer.</p>					N/A
Tensile strength	section 6.1 ISO 13934-1 or ISO 3376	Woven outer textiles shall have a minimum tensile strength of 400 N. Leather shall have a minimum tensile strength of 80 N.	Leather: direction 1: 514 N direction 2: 594 N Outer textile green: lengthwise: 555 N crosswise: 663 N				P
Tear strength	section 6.2 ISO 13937-2 or ISO 3377-1	Woven outer textiles and leather materials shall have a minimum tear strength of 20 N. The tear strength of leather shall be determined in two directions at right angles in the plane of the material	Leather: direction 1: 131 N direction 2: 119 N Outer textile green: lengthwise: 26 N crosswise: 22 N				P
Burst strength of knitted materials	section 6.3 ISO 13938-1	The burst strength of knitted outer material shall be a minimum of 200 kPa.					N/A
Seam strength	section 6.4 ISO 13935-2	The seam strength for textiles shall be at least 225 N for textiles and 110 N for leather.	938 N				P
Dimensional change of textile materials	section 6.5 ISO 5077	<p>The dimensional change of woven textile materials shall not exceed $\pm 3\%$ when tested after a pre-treatment</p> <p>The dimensional change of knitted textile materials shall not exceed $\pm 5\%$ when tested after a pre-treatment.</p>					N/A
Requirements for leather	section 6.6 ISO 4048	Fat content The fat content of leather shall not exceed 15%.	/* AZ 95716 lighter brown 4,3 % brown 7,2 %				P

Information according to EN ISO 11611

parameter	acc. to ISO 11611	requirement	test result	note			
				P	F	N/A	N/T
Information supplied by the manufacturer	section 8 EN 340						
general	section 8.1	<p>When welders' protective clothing is delivered to the consumer, instructions for use shall be provided in accordance with ISO 13688.</p> <p>The manufacturer shall give as much information as possible on known factors of durability, especially on durability to cleaning. See ISO 13688 for further details.</p> <p>In the case that applying a finish can restore the protective properties, the maximum number of cleaning cycles before re-application of the finish shall be clearly indicated in the information notice.</p>	given			P	
Intended use	section 8.2	<p>At least the following basic information shall be provided:</p> <p>a) any guidance on the appropriate choice of class of welders' protective clothing, (see Annexes A and B);</p> <p>b) any identified hazards against which the clothing is intended to protect (e.g. flames, molten metal spatter, radiant heat and short term, accidental electrical contact);</p> <p>c) a warning that for operational reasons not all welding voltage carrying parts of arc welding installations can be protected against direct contact;</p> <p>d) for protective clothing, a warning that additional partial body protection may be required, e.g. for welding overhead;</p> <p>e) a warning that the garment is only intended to protect against brief inadvertent contact with live parts of an arc welding circuit, and that additional electrical insulation layers will be required where there is an increased risk of electric shock; garments meeting the requirements of 6.10 are designed to provide protection against short term, accidental contact with live electric conductors at voltages up to approximately 100 V d.c.;</p> <p>f) aprons should cover the front body of the user at least from side seam to side seam;</p> <p>g) using additional partial protective garments, the basic garment shall meet at least Class 1</p>	given			P

Information according to ISO 11611

parameter	acc. to ISO 11611	requirement	test result	note			
				P	F	N/A	N/T
Improper use	section 8.3	<p>Attention shall be drawn to the hazards of improper use.</p> <p>a) The level of protection against flame will be reduced if the welders' protective clothing is contaminated with flammable materials.</p> <p>b) An increase in the oxygen content of the air will reduce considerably the protection of the welders' protective clothing against flame. Care should be taken when welding in confined spaces, e.g. if it is possible that the atmosphere may become enriched with oxygen.</p> <p>c) The electrical insulation provided by clothing will be reduced when the clothing is wet, dirty or soaked with sweat.</p> <p>d) For two-piece protective clothing, a warning that both items shall be worn together to provide the specified level of protection.</p> <p>e) For additional body protection, a warning that the garment is intended for use in addition to protective clothing providing protection against welding hazards.</p> <p>f) Warnings, regarding other limitations of a garment, as identified by the manufacturer.</p>	given			P	
Care and maintenance	section 8.4	<p>Instructions shall be given to advise the user on cleaning procedures, the maximum number of cleaning cycles, maintenance, inspection and repair of the garment where practical.</p> <p>Manufacturers shall include the information that welder's protective clothing be cleaned regularly in accordance with the manufacturer's recommendations. After cleaning, the clothing should be inspected.</p>	given			P
